

Democracy, Development and Innovation:

A Korean Perspective

Keun Lee (www.keunlee.com)

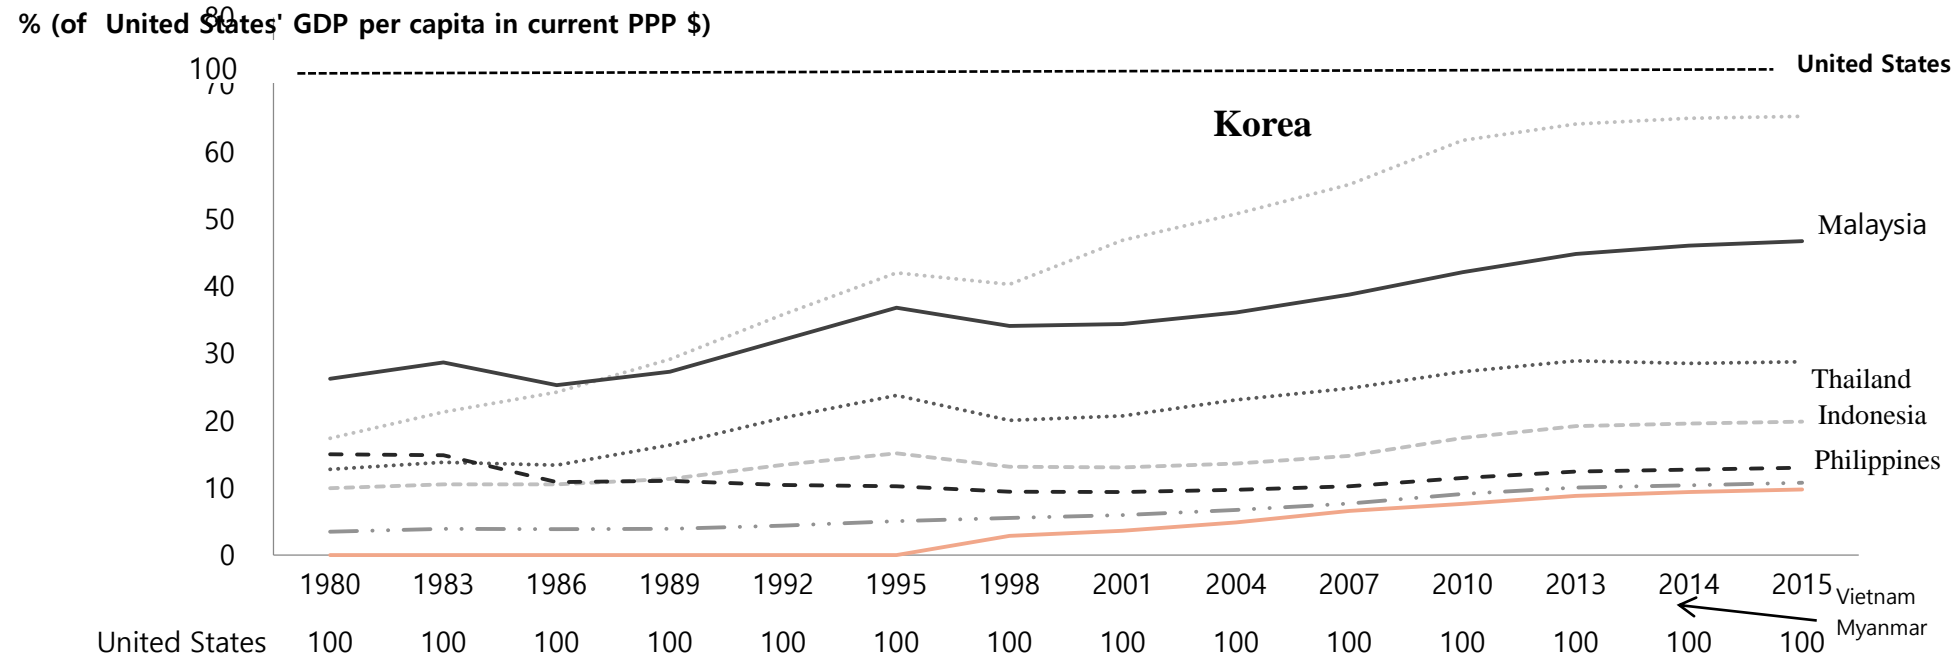

Seoul National University; Editor, Reserach Policy

A Member, CDP (committee for Dev't Policy, UN/DESA)

Democracy, Dev't and Innovation in Korean History

- In 2017 Korea = impeachment of President Park Geun Hye
- The 2017 impeachment = end of another chapter in Korean history.
 - It marks 30 years since the 1987 mass-demonstration for democracy that ended the pseudo-democracy of electing the leader by indirect voting, and re-instituted free and direct election with a new Constitution.
- Now, we had a new President, Moon, but we are facing slower rate of economic growth (2% range), which means a lot of difficulty in creating jobs and paying for social welfare.
- Brief History of Korea
 - Independent nation for several thousands except 1911 -1945 (Japanese colony); Civil War (1950-53) followed by hunger and poverty
 - Economic takeoff since the 1960s to join OECD in 1993 but crisis in 1997 followed by quick recovery in the 2000s

Korea's rapid Catch-up with the USA since 1960: % (of US GDP per capita (ppp \$):

**Middle
income
trap**

Debates on the 3 factors for Economic Growth: **Policy, Institution (political democracy), Geography**

- 1) Policies (open door; international integration)
=> failure with the Washington Consensus
 - 2) Not policies but political Institutions matter (Acemogule et al 2001):
=> *Excuse for the Washington Consensus*; eg) South vs North Korea
 - 3) Geography matter: A destiny? (J. Sachs)
 - 4) Does institution matter? -> Human capital (Glaeser et al)
(eg. South Korea: democracy only after economic growth)
- => No discussion of Innovation and Capabilities
- => **Lee & Kim (2009), “different factor at different stage of development”**
- **Confirms importance of Innovation and high education for upper middle and higher income countries;**
 - **cf) political Institution and basic human capital matter for low and lower middle C's**

Quality of Political Institutions	(constraints on executives)		
	1965	1980	2000
Korea	3	1	6
Taiwan	2	3	6
Philippines	5	1	6
Thailand	1	3	7
Malaysia	7	5	4
China	2	3	3
India	7	7	7
Brazil	1	1	6
Argentina	3	1	6
Chile	5	1	7
Mexico	3	3	6

Source: Polity IV Dataset; from Lee and Kim 2009 table 1

Acemoglu and Robinson, Why Nations Fail ->b/c extractive vs inclusive institution

Bill Gates' book review

"Never explain how to move to more "inclusive" institutions"

Inclusive vs. extractive :

**-> relevant more in low income or pre-modern economy
b/c less difference among middle income countries**

**=> Why Nations Fail at Middle Income Stage:
due to not-Innovative systems**

Challenge by the Beijing Consensus 北京共識 in China

- 1) No: Western Democracy -> growth
 - 2) No: privatization/financial liberalization
-> growth
 - 3) Yes: Communist Party/Authoritarianism
-> growth
 - 4) Selective/strategic opening -> growth
- >Need for a new thinking on: Political Democracy and development

**Now,
Today's Korea at Post-Catchup stage
Changing Needs:**

***From Political Democracy
to Economic Democracy
(more SMEs, worker participation, equity)
to sustain growth in Korea:***

***Need for a Schumpeterian Perspective
(National Innovation systems)***

**Lundvall; Nelson (1992):
defines NIS = elements and relationships**

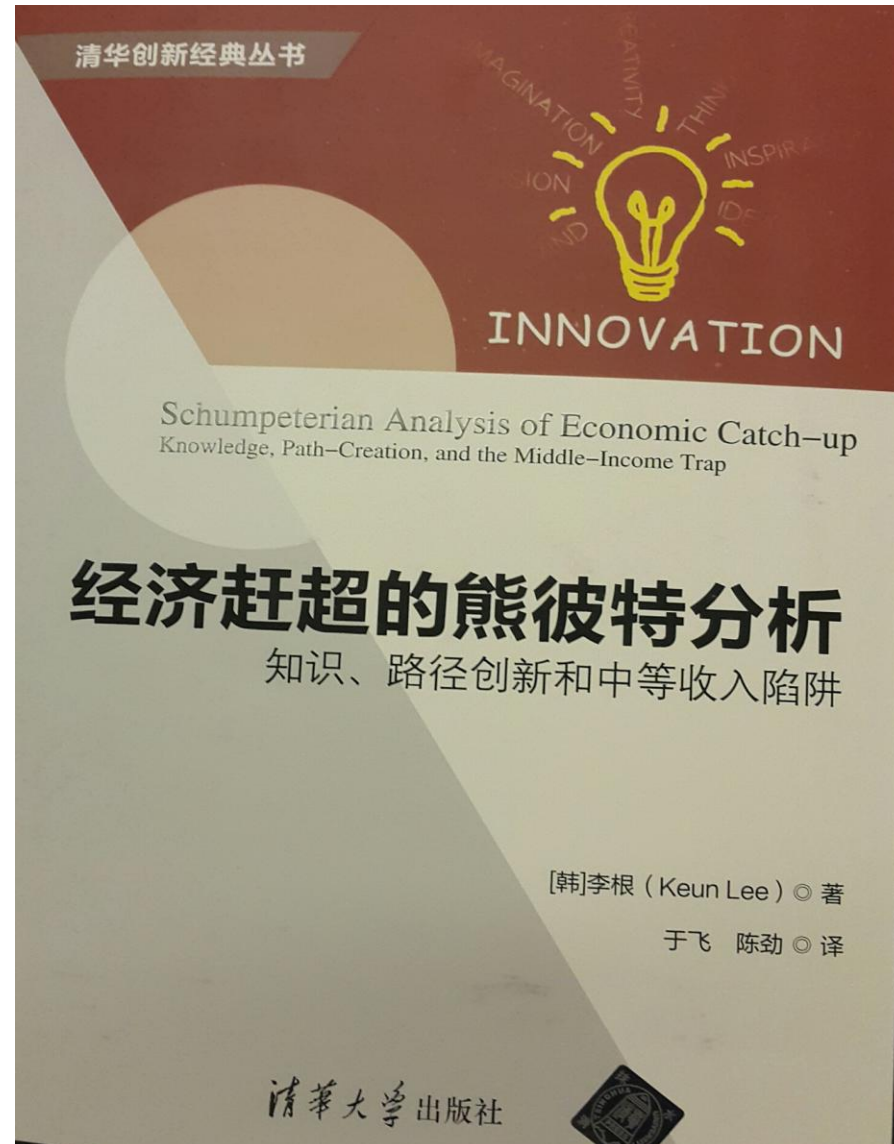

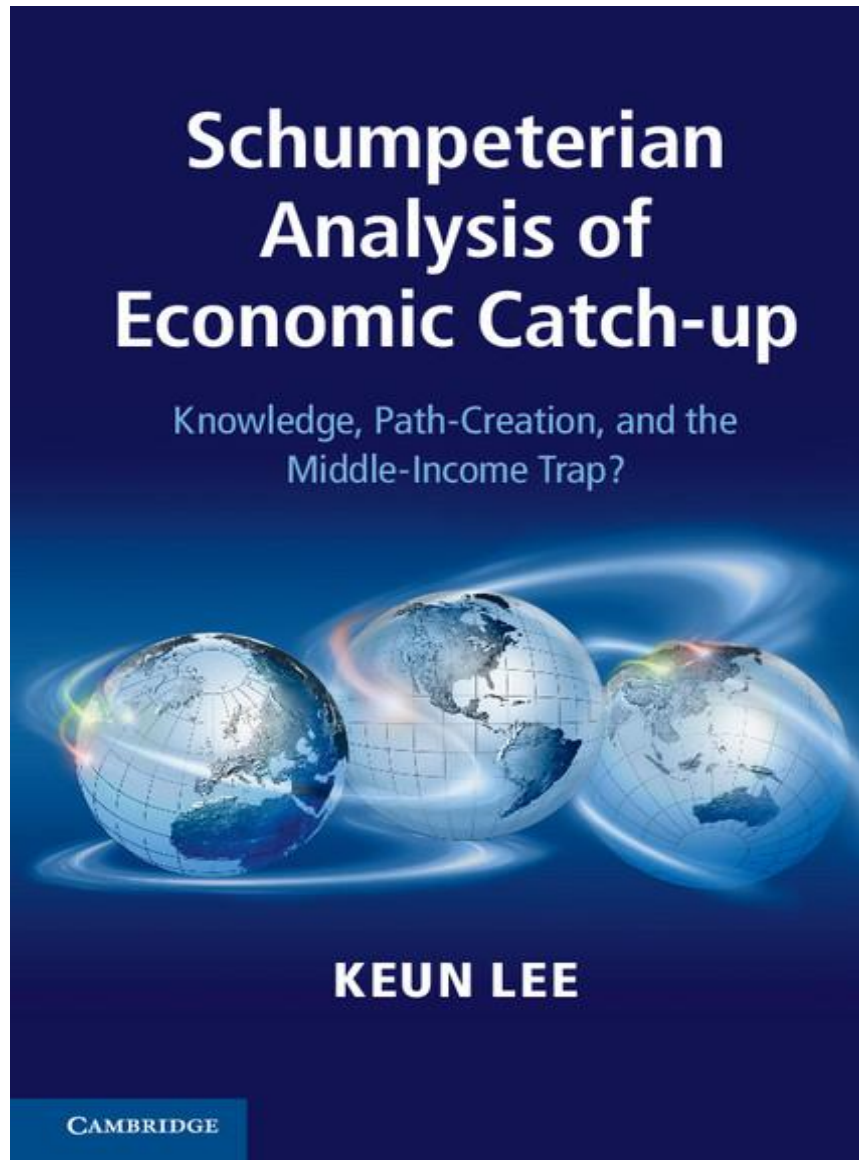

- 1) which interact in the production, diffusion and use of knowledge**
- 2) rooted inside the borders of a nation state.'**

**It is about efficiency
in acquisition, creation, diffusion, and utilization
of knowledge.**

**-> The differences in NIS
determines different levels of competitiveness of nations.**

Analyzed the Innovation systems at 3 Levels:
country; Sector; firm

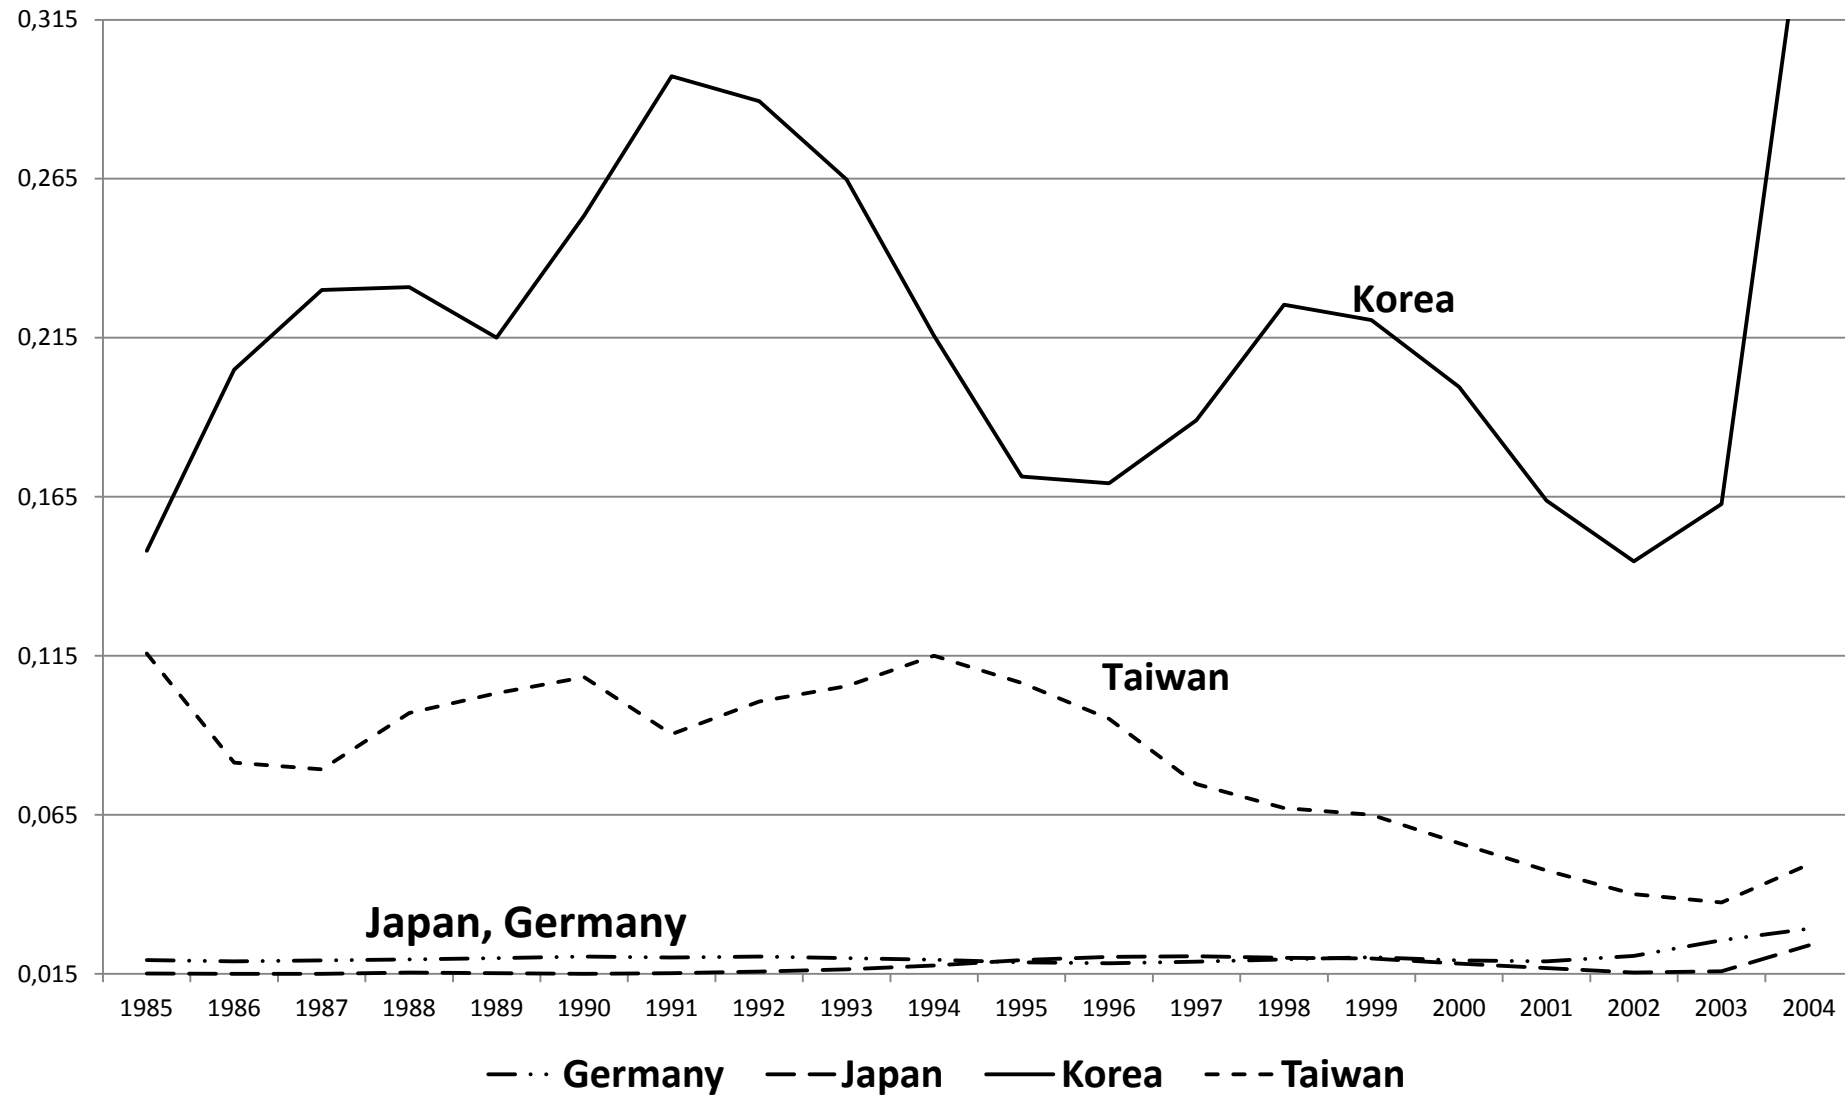

=> 2014 Schumpeter Prize

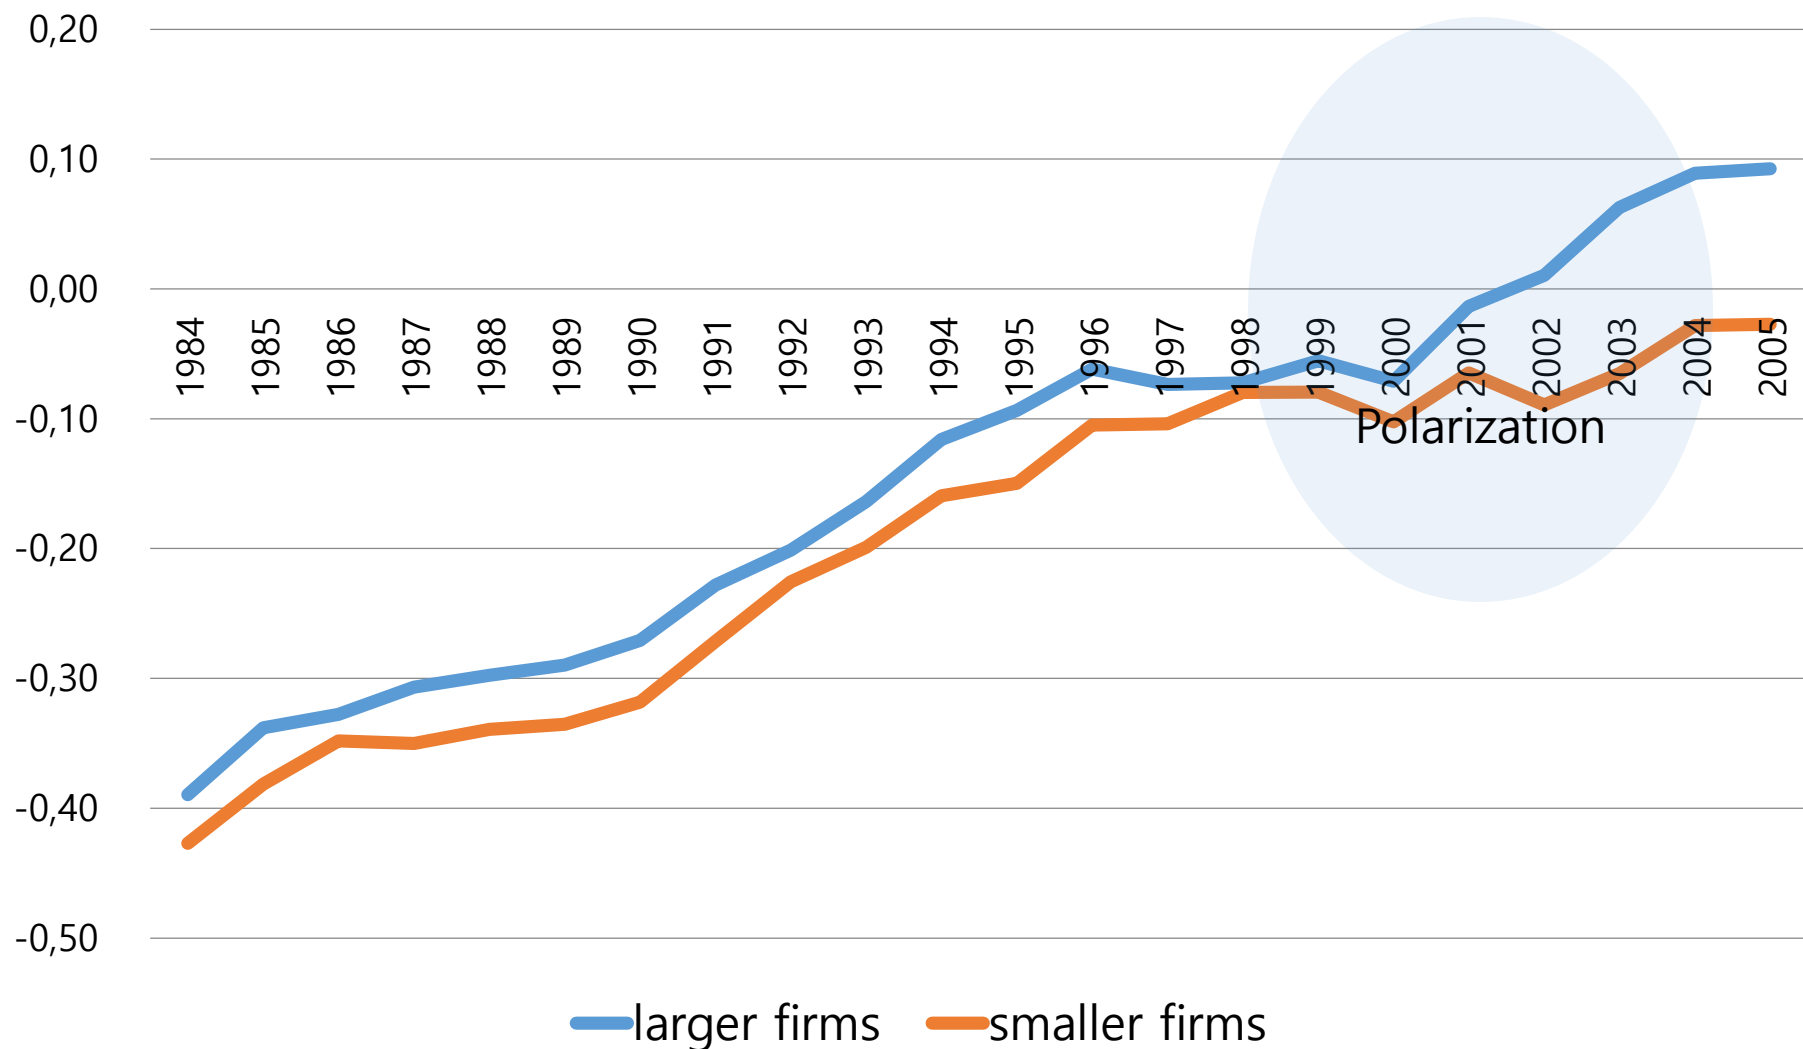

5 Key Variables to measure the NIS

Intra-national creation and diffusion of Knowledge (=localization of knowledge) (vs. reliance on foreign sources)
Balanced vs. Concentration of knowledge creation (by assignees)
Technological specialization 1 (short vs. long cycle technologies)
Technological. Specialization 2 (high vs. low originality technologies)
Technological Diversification (Wide vs. Deep in patent portfolio)

Assignee Concentration by HH-Index : Korea, too high (3 year moving average)

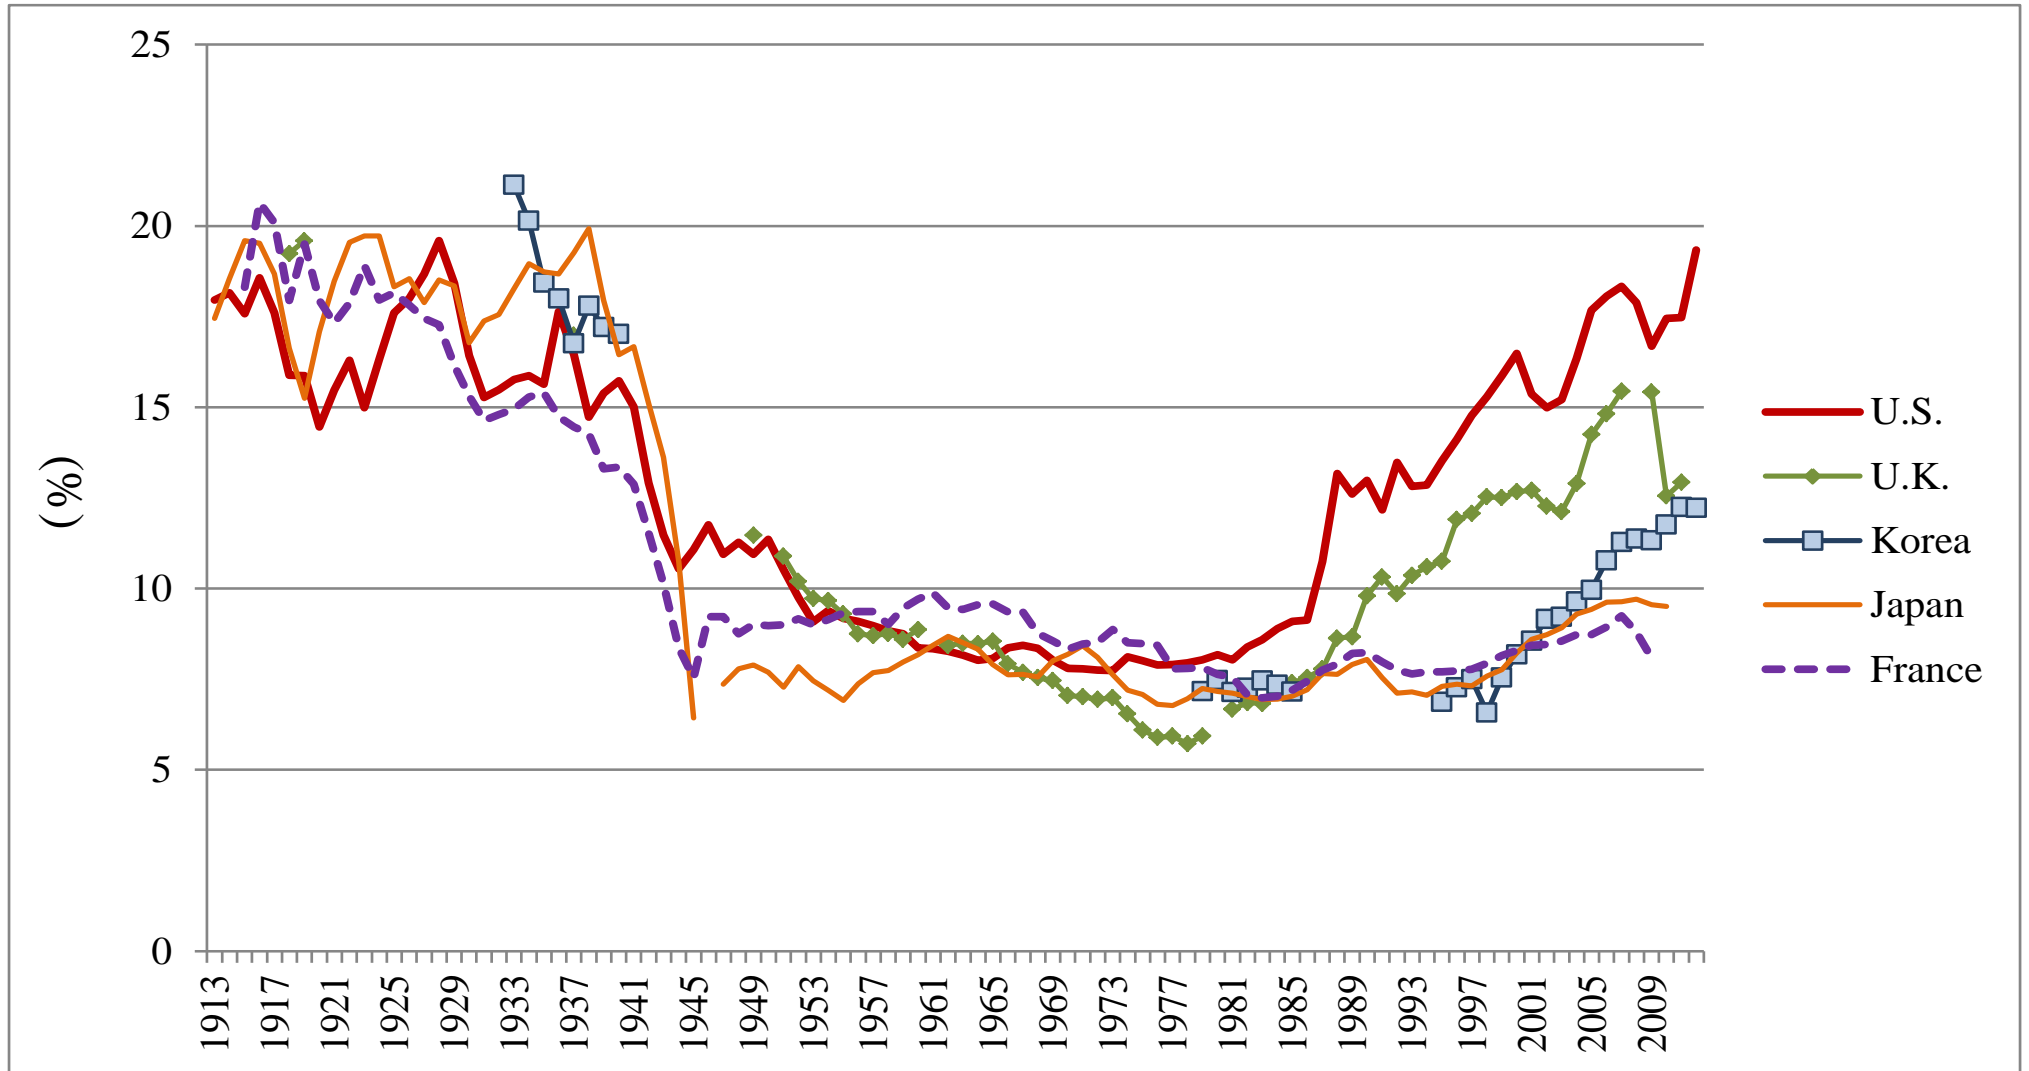

Also, increasing Productivity Polarization since 2000 in Korea
Productivity (TFP) by firm size (large vs Small firms)

Income Shares by Top 1% Rich:

The higher in Anglo-Saxon Capitalism with higher financialization;
In Korea, rapid increase since '97: (Kim; 2014)

My messages

1) Catch-up Stage

Minimum degree of political democracy required for economic growth at lower income stages

- but, political democracy alone does not bring in growth beyond the upper middle income stage, which requires innovation capabilities
- Long term growth -> labor demand -> high wages -> less inequality

2) Post-Catchup Stages

Growth slowed down plus financialization -> more inequality

- More economic democracy needed to sustain growth:
(SMEs/Startups, worker empowerment, and welfare system)
- * Also to check too much financialization

Gracias! ଝନ୍ନୁଦିତେ !
Obrigado!

Thank you! Tak!
amesege'nalo'

謝謝大家

감사합니다

Danke shon!

ありがとう
