Engineering Lab

Exploring mechanisms for increasing innovation

Vangelis Karkaletsis

Research Director

*Head of Software & Knowledge
Engineering Lab*

DEMOKRITOS

Goethe-Institut Athen, Tuesday, 27 November, 2018

Outline

Strategies for increasing innovation capacity

- **Products and services for the industry**
 - ⑩ Provision of knowledge-based products and services through co-creation with the industry, focusing on solving specific problems
- **Synergies with industrial leaders**
 - ⑩ Providing solutions customisable to their needs
- **Spin-offs**
 - ⑩ Participation in spin-offs and start-ups that deploy innovative products and services into the market
- **Prototyping of innovative ideas**
 - ⑩ Prototyping innovative applications and demonstrating their business potential
- **Outcomes and lessons learned**

Services and Measurements

The story

- Research is the primary means to generate and share knowledge
- Sharing through *co-creation with industry*
- Aim is to leverage the multitude of systems, platforms, technologies, expertise and know-how, to solve specific problems

The effect

- Four specialised laboratories at IIT, offering services and measurements
- Providing specialised studies and solutions for software applications
- Strengthening ties and developing partnerships with technology companies

Synergies with industrial leaders

The story

- NCSR-D is widely acknowledged for its research and innovation capacity
- Synergies with industrial leaders can significantly accelerate the transformation of research into practice

The effect

- Several co-operations with industrial leaders
 - ⑩ large IT companies, national leaders in banking industry, ...
- NCSR-D solutions integrated in widely-used portfolios
 - ⑩ Access to a wider network of industrial partners
- Fostering an “iterative” process for research and innovation

Spin-off

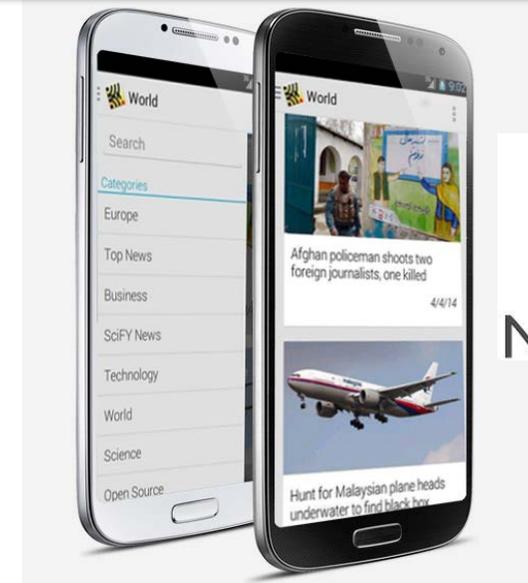

NewSum:
From Thesis to
Market

The story

- 2005 to 2009: Funded PhD on summarization
- 2009 to 2012: Evolution through collaboration (NCSR “D” - SciFY) and open source
- 2012 to today – Ready products and services

The effect

- AI/NLP Infrastructure
- Mobile app
- National and International awards
- Ongoing spin-off effort

NewSum

The story

- Up to 2015 - Funded research on summarisation and personalisation
- 2016-2018 - Google DNI project

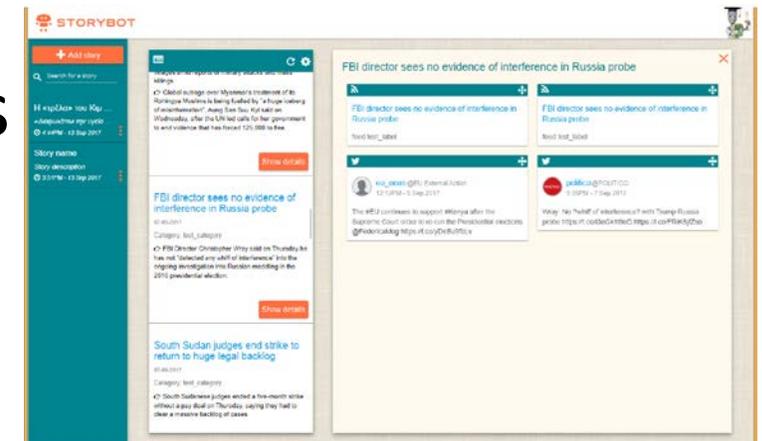

Prototyping

StoryBot:
Supporting
journalists through
AI

The effect

- Online platform
- Automated workflows in news production
- Robot-assisted journalism

Prototyping

OpJ:
Evidence-based
stories

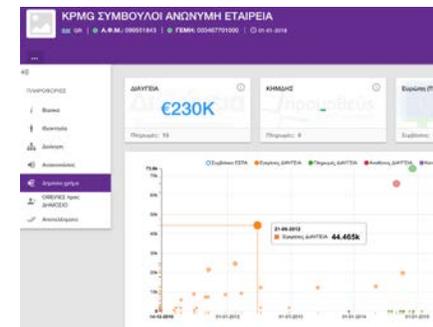

The story

- Strengthen the re-usability of open data by journalists
- ⑩ Support journalists to create evidence-based stories, supported by open data, while readers can directly refer to original sources
- 2017-2018 - Google DNI project

The effect

- Online platform
- ⑩ Company name matching and advanced search in public procurement
- ⑩ 1-click provenance to original data source
- ⑩ News enrichment through data tags

 YourDataStories

Prototyping

DataStories:
Bringing sense
and structure to
data

The story

- Bridging the gap between the potential of open data, and extracting exploitable value from open data
 - ⑩ 2015-2018 – “YourDataStories”: Research funded by EU (Horizon 2020)
- 2018-2020 - Google DNI project

The effect

- An online ecosystem for journalists that brings sense and structure
 - ⑩ A methodology for “conceptualising” and “humanising” data
- An innovative application that demonstrates the business potential of open (governmental) data

Outcomes

Lessons Learned, New initiatives

- Synergies with industry accelerates the transformation of research into practice
- Innovation capacity can be significantly benefited from networking, interaction and collaboration
 - ⑩ Among stakeholders with different knowledge, expertise, and understanding
 - ⑩ Significant benefits from an “iterative” interaction for research and innovation
- Setting up NCSR-D Digital Innovation Hub
